

catches so much more
than traditional CCTV

Megapixel CCTV

**Use fewer cameras
to store more data**

**Choose what to
watch rather than
what to record**

Focus.

Traditional Pan-Tilt-Zoom cameras allow you to choose what to record in detail. Once you zoom in on a face, that face is all you've recorded, and it takes direct supervision to do so. Digital Pan-Tilt-Zoom allows you to choose what to view anywhere in a scene in fine detail, live or after an incident, because you're recording it all, all the time, keeping a record of everything even when you're distracted.

Resolution.

With the fine detail of megapixel CCTV, one camera can cover areas that require multiple traditional CCTV cameras, decreasing data storage needs and extending the recording time of your DVR or PC. Substitute the 28 traditional CCTV cameras needed to cover a 10,000 square foot car park with just 3 of ICU's 3.1 megapixel cameras.

Confidence.

No business is free from worry, but ICU will provide everything you need to help you enjoy one that is safe and secure, whether your needs are great or small.
